

## Database Development 2

Database Development 2(DADE2)	
Assignment Number	1
Assignment Name	Formative Assessment
NQF Level	5
Credits	9
Due Date	
Marks	<p>Total marks = 80</p> <p>Formative assessments through the semester contribute towards the student's module mark and are used to assess progress and identify areas for improvement. This formative assessment will contribute 25% towards final mark.</p> <p>Take note of the following with regards to late submissions:</p> <ul style="list-style-type: none"><li>a. One (1) day late (-5%)</li><li>b. Two (2) days late (-10%)</li><li>c. Three (3) days late (-15%)</li></ul>
Individual / Group Assignment	Individual
Lecturer Information	
Lecturer	
Lecturer E-mail	

### Learning Objective:

Formative assessment 1 will cover the following concepts:

- a. Database creation using T\_SQL
- b. Views
- c. Stored procedures
- d. Inserts
- e. Code comments
- f. Database backup

### Attributes/Competencies Assessed:

- a. 114048 - Create database access for a computer application using structured query language

### Scope:

The scope of this formative assessment is based on a solid knowledge coding databases using T\_SQL.

### Technical Aspects:

The number of pages for this formative assessment is 16 and the following font and size should be used in your report:

- a. Font: Arial
- b. Size: 12 and 14 for headings
- c. Font colour: Black

Save and upload the report as a .PDF(**No backgrounds**) with the following naming convention:

- a. Student no\_StudentName\_StudentSurname\_ModuleCode\_FA1(**No ZIP folder uploads**)

Ensure adequate referencing is used when using information from either books or internet. Plagiarism is a serious offence and can result in 0% for the assessment when excessive work is copied without proper referencing.

Please complete the following and sign as requested for Portfolio of Evidence (POE)

- a. Save code with screenshots of each question and upload when completed
- b. Pre-Assessment agreement (Save, sign and submit as PDF)
- c. Assessment Feedback Agreement (Save, sign and submit as PDF)

### Mark allocation for report

See Mark allocation sheet below

## Scenario

### Suzi's Yoga Studio

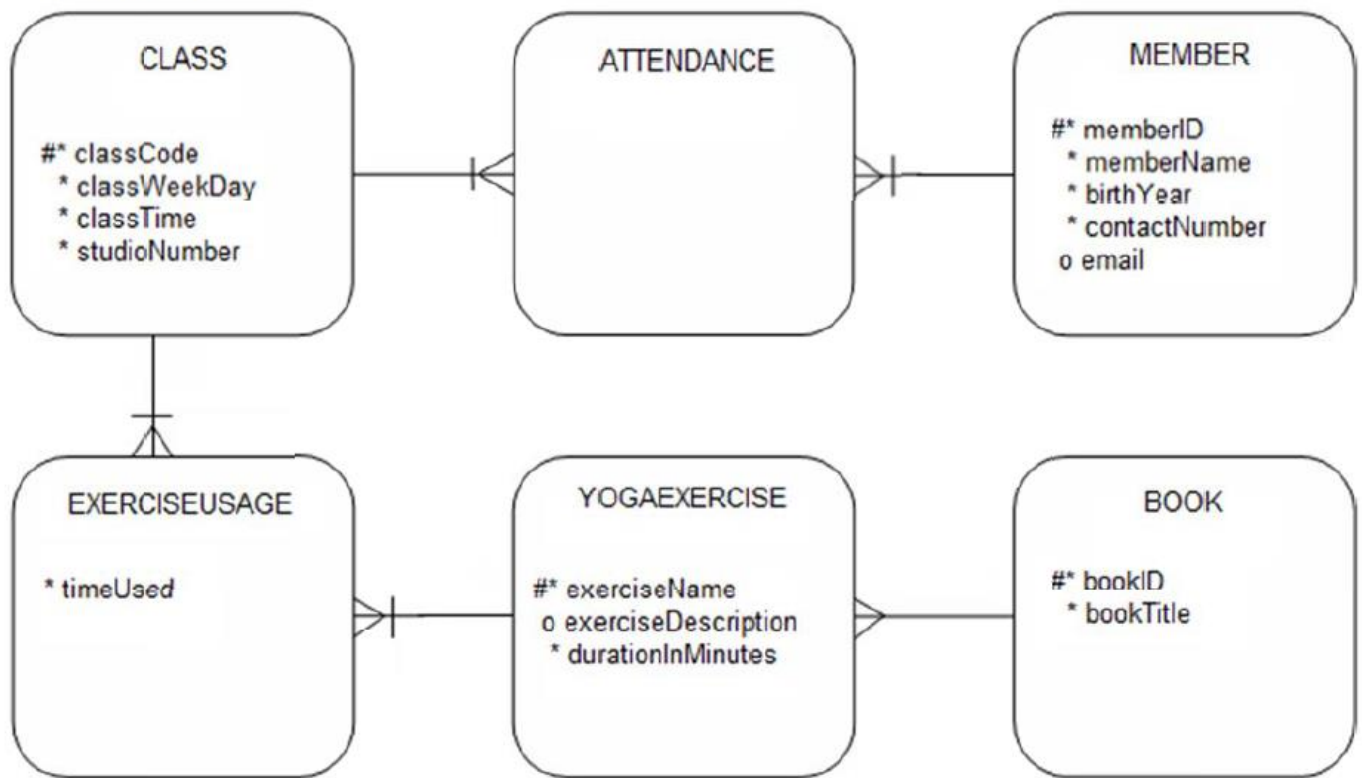

Suzi's family started their own yoga school and enlarged their house to accommodate four studios. Suzi has recruited you to be their database designer.

The database will store information on their members, yoga classes/sessions, and the various yoga exercises.

- People must be 16 years of age or older in order to become a member and they are welcome to assign themselves to more than one class/session per week.
- If a class is cancelled, Suzi must be able to contact members via telephone. Members who provide their email address will also be notified via email.
- Fixed yoga sessions are scheduled: for example, every Monday morning at 07:00 studio #1 is used and every Tuesday at 18:00 studio #4 is used. Each class/session record must contain sufficient information to indicate which weekday, time, and studio is reserved for it.
- Suzi references each exercise from a particular book and she would like to keep track of the book IDs and titles in case she needs to do more research on a particular exercise.
- Suzi needs to keep track of the different exercises performed at the sessions. She specifically wants to know the name, description, and the length of each exercise in terms of minutes.
- Suzi also needs to specify how many times an exercise must be performed per session/class.

The following ER Diagram should be used to answer all questions that follow:

## ERD from 3NF

## Question 1

(16)

Create a script file that includes the code for creating the database and all of the tables required in the project. PRIMARY KEY, FOREIGN KEY, UNIQUE, and CHECK constraints must be included. Make use of the IDENTITY property, DEFAULT values, and constraints.

(16)

```

SQLQuery1.sql - L...P8E\TAFADZWA (54)*
1  --a. Each script file must have a header section (using comments) that contains the following
2  information:
3  --• Script file name script1_formative
4  --• Programmer name Tafadzwa Chiripanyanga
5  --• Date 23-Oct-2023
6  --• A short description of what the script file does
7  --creating a new database made mistakes on my previous one and i couldn't rectify them
8
9  use master -- master database engine
10 go -- it separates execution statements
11
12 create database YogaStudio -- creating new database
13 on primary
14 (
15     name = 'YogaStudio', --primary file name
16     filename = 'c:\sql19\YogaStudio.mdf', --directory of the file
17     size = 5MB, --size of the file
18     filegrowth = 10% --file growth
19 )
20 log on

## Question 2

(6)

Create a script file to insert data into your user created tables. Add at least four records for each table without foreign keys, and seven records for each table that does contain a foreign key.

(6)

```
yogastudio script...P8E\TAFADZWA (54))  X  yogastudio script...P8E\TAFADZWA (53))
1  --a. Each script file must have a header section (using comments) that contains the following
2  information:
3  -- Script file name      script3 Yoga
4  -- Programmer name      Tafadzwa Chiripanyanga
5  -- Date      23-Oct-2023
6  -- A short description of what the script file does
7  -- inserting data into my tables
8  --add a constraint to check if member is atleast 16
9
10 use yogaStudio
11 go
12
13 ALTER TABLE Member
14 ADD CONSTRAINT checkAge CHECK (DATEDIFF(YEAR, birthYear, GETDATE()) >= 16);
15
16
17
18 insert into MEMBER(memberID, memberName ,birthYear ,contactNumber , email )
19 values (2 , 'John Davis', 2001 , 02345678 , 'johndavis@gmail.com')
20
21 insert into MEMBER(memberID, memberName ,birthYear ,contactNumber )
22 values (3 , 'Peter Andrews', 2004 , 02345678 )
23
24 insert into MEMBER(memberID, memberName ,birthYear ,contactNumber )
25 values (4 , 'Oscar Mathius', 2000 , 02345678 )
26
27 insert into MEMBER(memberID, memberName ,birthYear ,contactNumber )

### Question 3

(16)

Create a script file to create the following views:

(16)

a. vw\_Exercises

Select book title, exercise name, exercise description, and the field representing how often the exercise is used per session/class.

LAPTOP-6DEV1P8E...studio - Diagram\_04 yogastudio script...P8E\TAFADZWA (53))

```

1  --a. Each script file must have a header section (using comments) that contains the following information:
2  -- Script file name  script4 Fomartive
3  -- Programmer name  Tafadzwa Chiripanyanga
4  -- Date  25-Oct-2023
5  -- A short description of what the script file does
6  --creating views
7
8
9  --a. vw_Exercises
10 --Select book title, exercise name, exercise description, and the field representing how often the exercise is used per session/
    class.
11
12 use YogaStudio
13 go
14
15 create view vw_Exercises
16 as
17 --selecting all the needed columns
18 select
19 b.bookTitle ,
20 ye.exerciseName,
21 ye.exerciseDescription,
22 sum(eu.timesUsed) as 'number of times per exercise' --summing up timesused per class
23 eu.classCode
24 from BOOK as b --nicking our book class to b
25 join YOGAEXERCISE as ye --joining book table with yogaexercise
26 on b.bookID = ye.bookID ---bookid in these tables must be the same

```

## Question 6

(4)

Create a script file to delete the database that you create.

(4)

```
1 use yogaStudio
2 go
3 --a. Each script file must have a header section (using comments)
4 -- that contains the following information:
5 --• Script file name script8 formative
6 --• Programmer name Tafadzwa Chiripanyanga
7 --• Date 30-October-2023
8 --• A short description of what the script file does
9 --script to delete my database
10
11
12 --Create a script file to delete the database that you create.
13
14 --deleting my yogastudio database
15 if exists (select name from master.dbo.sysdatabases
16 where name = 'yogaStudio')
17 drop database yogaStudio --to drop is to delete
18 go
```

Question 7 (4)

Create two (2) appropriate indices on your tables. (4)

```
SQLQuery2.sql - L...P8E\TAFADZWA (54))* X yogastudio script...P8E\TAFADZWA (53))
1 -- that contains the following information:
2
3
4 --• Script file name script9 formative
5 --• Programmer name Tafadzwa Chiripanyanga
6 --• Date 30-October-2023
7 --• A short description of what the script file does
8 --creating indices which are used To accelerate data access,
9
10
11 --Create two (2) appropriate indices on your tables.
