| Brackets | [] | When creating logical diagrams from equations or writing equations from them, the second goal is to create a diagram. |
| Braces | {} | When writing an equation from a logical diagram, priority three. When creating logical diagrams from equations, the first priority |
| Vinculum | | The Vinculum serves as a grouping symbol and, when appropriate, can be substituted for any of the others to represent NOT. |

Draw a decision table to illustrate each of the following. Remember to include the table title and size.

A lady goes to buy clothes, her options are:

- a. A red dress
- b. A cap
- c. A shirt
- d. A mini skirt

She cannot buy a shirt unless she buys a mini skirt as well. If she buys zero, one, or two items of clothing she gets one pair of shoes. If she buys three or four items of clothing she gets two pairs of shoes.

Question 10 (22)

| Unit standard | Specific outcome | Assessment criterion |
|---------------|------------------|----------------------|
| 115392 | 2 | 3 |

Draw a program flowchart for the following problem. Use your own variable names.

To be accepted as a Flyaway airline employee, an applicant must be over 21 but less than 35 years of age, over 170cm tall, and weigh more than 60 kilograms. Otherwise, the applicant must be rejected. The required input values are name, age, height, and weight.

Processing continues until the name "ZZZ" is entered.

The factors are:

- a. Name = "ZZZ"
- b. Over 21 years of age

- c. Less than 35 years of age
- d. Height over 170 cm
- e. Weight over 60 kilograms

The actions are:

- a. Print name of acceptable applicant.
- b. Reject applicant and read next record.
- c. Stop processing when the name "ZZZ" is input.

As the name is used as an end-of-file condition, it is better and more efficient programming practice to first input the name, test it, then only if the end-of-file condition is NOT satisfied, input the rest of the data.
