<u>Scenario</u>

Tygervalley Pet Shelter

Tygervalley Pet Shelter (TPS) receives food donations from a group of pet food manufacturers.

TPS relies on each manufacturing company for a particular need. For example, Veggie Land supplies all the vegetables and Premier Seed Suppliers supplies all the seeds. The different food types are allocated to the animals according to their category. For example, food type 'seeds' is allocated to category 'Birds', while food type 'vegetables' is allocated to the categories 'Mammals' and 'Birds'.

Each animal category is subdivided into different pet types. For example, the mammal record could relate to pet types 'Dog' and 'Cat'.

TPS has recruited you to be their database designer. The database will store information on their suppliers, food types, animal categories, and pet types.

- Record a unique, auto-incrementing ID, company name, contact number, and possibly an email address for each manufacturer.
- When recording information about the different food types, ensure that the expiry date is also stored.
- When recording how much food will be allocated per animal category, specify the quantity amount as two separate fields. For example, if 8.5 kilograms of Roast Chicken Pellets are allocated to category 'Mammals', '8.5' and 'kg' will be two different fields.

- The stock level for each pet type must also be stored together with the pet type so that the number is known for each category. For example, there are 10 dogs and 20 cats for category 'Mammals', or 40 parrots for category 'Birds'.

Initial ER diagram

Draw an ER diagram which must indicate the following:

- Optionality of relationships (may or must)
- Cardinality of relationships (one or many)
- Optionality of attributes (* or o)
- Clear indication of PKs and FKs
- Named relationships and entities

Use normalisation

- Place the attributes in zero normal form.
- Normalise the attributes to third normal form. Show each of the intermediate normal forms.
- Draw an ER diagram from the third normal form.

Mapping to tables

Create an initial database design from the ER diagram created from 3NF and provide at least two rows of sample data.
